PROFESSIONAL SUMMARY

Data Analyst with hands-on proficiency in SQL, Excel, Tableau, and Power BI, built by cleaning and modeling real-world-style datasets rather than pre-cleaned tutorials. Delivered an end-to-end fraud and risk analytics case study — SQL data cleaning, KPI design, and a Tableau monitoring dashboard — alongside healthcare and sales analytics projects that turned raw records into decisions leadership could act on. Brings a background in front-line operations (guest services, inventory control) where accuracy, discretion with sensitive records, and composure under pressure were non-negotiable — the same instincts now applied to spotting patterns in data. Certified Data Analyst (Skill Ahead Academy, July 2026), actively seeking remote or hybrid roles as a Data Analyst, Fraud/Risk Analyst, or BI Analyst.

CORE SKILLS

Data Analysis: Data Cleaning, Data Validation, Data Transformation, Exploratory Analysis, Trend Analysis, Root Cause Analysis

Visualization & BI: Tableau, Power BI, Excel Dashboards, KPI Design, Data Storytelling, Dashboard Development

Databases: SQL, MySQL, Query Writing, Data Profiling, ETL-style Data Prep

Spreadsheet Analysis: Pivot Tables, Power Query, Lookup Functions, Conditional Formatting, Slicers

Reporting: Stakeholder Reporting, Business Recommendations, KPI Reporting, Performance Monitoring

Analytics Domains: Fraud Detection, Risk Analysis, Healthcare Analytics, Sales & Conversion Analytics

Soft Skills: Analytical Thinking, Attention to Detail, Confidentiality, Communication, Problem-Solving, Working Under Pressure

KEY PROJECTS

Fraud & Risk Intelligence Dashboard — Apex Trust Bank (Portfolio Case Study)

Tools: SQL (MySQL), Tableau, Excel

- Cleaned and validated ~2,000 raw banking transaction records in SQL, resolving false-duplicate transaction IDs, mixed date formats, and missing merchant/channel data without deleting a single record — preserving data integrity for downstream analysis.
- Built an interactive Tableau dashboard tracking fraud rate, average risk score, and failure/reversal rate across 6 transaction channels, account types, and 2+ years of data.
- Identified card cloning and mule accounts as the leading fraud types (34 and 24 cases) and Mobile App/Internet Banking as the highest-risk channels, pinpointing Lagos and Abuja as regional fraud hotspots.
- Delivered six business-focused recommendations—including automated risk-score alerts and channel-specific monitoring—to strengthen fraud detection and support proactive risk management across ₦1.25B in analyzed transaction value.

Lead Conversion & Sales Performance Analysis — Emerald Properties (Portfolio Project)

Tools: Excel (Pivot Tables, Power Query, Slicers) — public Kaggle real-estate lead dataset

- Designed and developed an interactive Excel dashboard, segmenting 2,480 real-estate leads by salesperson, state, property type, gender, and inspection status to diagnose a 44.2% conversion rate.
- Found that inspected leads converted at 51.8% versus 24.5% for non-inspected leads — identifying property inspection as the single strongest predictor of a sale.
- Surfaced that Industrial listings converted at near-zero despite generating leads, with “too expensive” the top objection — informing pricing and inspection-scheduling recommendations to lift conversion above 44%.

Maternal & Child Health Service Analysis (Academic Case Study)

Tools: Power BI, Excel — structured practice dataset built for course case study

- Scoped and analyzed a maternal/child health dataset spanning 11 states and 5 facility types to evaluate antenatal attendance, delivery outcomes, and facility performance for a healthcare-analytics coursework brief.
- Built a Power BI dashboard tracking total patient visits (990), average ANC visits (4.39), and average length of stay (3.90 days), broken out by facility and complication type.
- Flagged postpartum hemorrhage, pre-eclampsia, and anemia as the leading maternal complications and translated findings into recommendations for monthly, facility-level performance monitoring.

PROFESSIONAL EXPERIENCE

Receptionist | Swisscottage, Lagos

2025 – 2026

- Managed guest and customer records with accuracy and confidentiality, handling sensitive personal and payment information daily — the same rigor now applied to data validation.

- Coordinated front-desk operations and documentation in a fast-paced environment, resolving customer issues in real time and catching errors before they reached management.

Inventory Officer | Iceage Bristro, Lagos

2023 – 2025

- Tracked and reconciled stock records under time pressure, catching discrepancies early — the same root-cause, notice-what's-off instinct now applied to fraud pattern detection.
- Maintained audit-ready inventory documentation and reported stock trends to management, an early hands-on introduction to data-informed operational reporting.

EDUCATION

National Open University of Nigeria (NOUN) — Mass Communication

CERTIFICATIONS

Certified Data Analyst (Excel, SQL, Tableau & Power BI) Skill Ahead Academy Issued: July 2026
